

SteelFacts Dynamic subscriptions provide user-interactive web-based access to steel industry statistical information. The SteelFacts Full Dynamic subscription provides interactive access to domestic raw steel production and steel mill product shipment statistics; trade statistics are provided for steel mill products as well as other select raw material and downstream products. The SteelFacts Full Dynamic subscription provides access to all of the dynamic data available in SteelFacts. The SteelFacts "Light" Dynamic subscription limits access to 5-years of history, does not provide trade statistics HTS level detail, and only enables the user to see trade statistics by Country or District but does not enable users to see trade statistics by both Country and District at the same time (for example, the "Light" subscription does not enable the user to see imports of Hot Roll Sheet from China coming through Houston, only imports coming from China and imports coming through Houston, discretely). In addition to interactive web-based access to the full range of SteelFacts data, the SteelFacts Full subscription provides users with complete access to all SteelFacts static reports.

A: The SteelFacts "Full" Dynamic Subscription provides trade data down to the 10-digit HTS level; these 10-digit HTS codes are "mapped" to the appropriate AISI Steel Mill Products, enabling users to "drill down" to see additional traded product detail.

B: The SteelFacts "Full" Dynamic Subscription enables users to simultaneously view a matrix of the Countries of Origin/Destination and the Districts of Entry/Exit for traded products; SteelFacts "Light" enables users to view either Countries of Origin/Destination or Districts of Entry/Exit for traded products, but not both at the same time.

C: The SteelFacts "Custom" Dynamic Subscription is intended to accommodate subscribers with narrow information needs (e.g., interest in 1 or 2 products) who would not benefit from access to a wide range of information (e.g. all products), yet who still want considerable depth of detail (e.g., "What are the source countries of imports of the product in which I am interested?") within the narrow range of information that they do need. The shaded "x"'s indicate the data that subscribers may elect to include in their subscription, but the actual subscription content will vary depending on subscriber choices; it should be noted that as the "Custom" subscription option is intended to meet the needs of subscribers with narrow steel product data needs, and by electing to cover more steel products the custom subscription may quickly increase in cost to the point where it is more feasible to choose an alternative dynamic subscription option
